

## PROHIBITED AND RESTRICTED GOODS

National authorities impose barriers to the entry of certain goods through Customs Acts, where lists of Prohibited and Restricted goods are published and updated periodically.

Lists can vary from nation to nation according to culture, principles, religion et al. From time to time, countries may delete or add goods to their P&R lists.

As an active customs enforcement compliance tool for supply chain management, MDC has developed a streamlined and data-enhanced Prohibited and Restricted screening engine that facilitates the prevention of embargoes and bottlenecks from the import and export of seizable goods.

Our engine is able to differentiate lists of prohibited and restricted goods, indicating

adequate documentation from relevant government regulatory bodies at an individual country level. This means more safety and data-driven compliance fulfilment that assists businesses to fully understand important aspects of their financial and supply chain decision making processes.

With high throughput and security in the HS classification, our P&R screening API provides an an additional compliance process layer designed to eliminate import risks and sanctions to cross-border movement of goods. The API screens lists of

- ◆ Banned and Dangerous Goods
- ◆ Agricultural and Food-Related Products
- ◆ Environmental and Global Protection Items
- ◆ Counterfeit or Pirated Goods
- ◆ Pharmaceuticals
- ◆ Et al.
